

# THE RICHEST MEN OF ALL NATIONS.

Russia, France, Germany, Prussia, China, Mexico and England  
All Have Their Millionaires.

It is a mistake for one to suppose that because the names Astor, Vanderbilt, and Rockefeller have become synonymous for wealth in the United States that the only millionaires are those who pay taxes in this country, for while it is a difficult matter to state who is the richest man in the world it is safe to say that there are scores of men in other countries, men whose names are almost unknown to the general reader, whose wealth is sufficient to make the American big fortunes sink into comparative insignificance. There are rich men in all the five continents, men who estimate their fortunes by millions and hundreds of millions, and some of them may be found in places where it would seem as if they were least likely to appear. Germany, for instance, is not a land of rich men, and yet there are several noblemen in the land, men like the Prince of Bismarck, Count Henckell, Donnersmarck and Prince Puckler, whose wealth will exceed that of any person in either England or America.

**ENGLAND'S RICHEST MAN.**  
The richest man in England is by long odds the Duke of Westminster. It has been estimated that his income is close upon \$10 a minute, which would make it

room of which he carried on his business, under the sign of the Red Shield. Here the first brood of budding millionaires, five sons and five daughters, were reared, and while they played about like the children of any other poor man, the father, it is said, drove hard bargains for a few ounces of old silver, or chattered about the advances on a bundle of old clothes. Small as this beginning was, however, it laid the foundation for a fortune that is world-wide in its influence for today there is not a country in the world where the wealth of the Rothschilds is not a financial power. A glance around the world of millionaires will reveal no more picturesque figure than that of Li Hung Chang, the Chinese millionaire, who has played a part in the world's history that will not soon be forgotten. It is impossible to estimate his character by Western ideals for his method of playing the game of politics has been bewildering and peculiar. During his long life, as one biographer has expressed it, "he has lost enough peacock feathers to make an Eastern screen and won them back in a manner that makes the world's head spin; he has had buttons cut off and buttons sewed on,

is undoubtedly Mr. Rockefeller. Less than forty years ago, it is said, he was a newshy, earning his living by selling papers on the street. To-day he is a man who cannot tell within a few millions just how much he is worth and his money is invested in scores of financial enterprises all of which are highly profitable. Next to Mr. Rockefeller, Cornelius Vanderbilt is the richest individual American and the Vanderbilts are closely followed by the Astors and the Goulds. In no instance, however, do the fortunes of our American millionaires equal those of some of the rich men of the old world, many of which like those of this country, were self-made or were built up from foundations that were laid little more than a century ago.

## His Humility.

"Barker humbly says he is but an instrument in the hands of destiny."  
"I know he talks that way, but all the same, he thinks destiny has its hands full when it is using him."—Indianapolis Journal.

THE FOUR RICHEST MEN IN THE WORLD, NOT INCLUDING JOHN D. ROCKEFELLER, WHO IS RICHER THAN ANY.

about \$5,000,000 per annum, and it is growing by prodigious leaps, owing to the fact that ninety-nine years hence made in the fashionable sections of London, his fortune is constantly increasing without any effort on his part and yet he is troubled with the fear that either he or some of his family will yet bring up in the poor-house.

In fact, as the bulk of the duke's property is in land, much of which is located in the fashionable sections of London, his fortune is constantly increasing without any effort on his part and yet he is troubled with the fear that either he or some of his family will yet bring up in the poor-house. As compared to the gigantic fortunes of some of the Russian multimillionaires, General Bismarck, who died a few months ago, left an estate the amount of which is simply insignificant and it is safe to say that the income from his properties would exceed that of the Czar of Russia, which has been estimated at \$50,000,000 per annum. It includes vast gold mines in Siberia and two estates, which control many large mines in Siberia.

Another Russian multimillionaire is the Princess Yessouff, whose husband is of American descent. She, too, has vast mining interests as well as estates in real estate and bonds that are sufficient to net her an annual income far greater than that of many monarchs. Equally insignificant is the French estate, which controls many large mines in Siberia.

**OF COURSE THERE ARE ROYAL PERSONAGES** in all parts of Europe, whose wealth has passed the \$500,000,000 point, but it is not customary to consider them with other millionaires, though they should not take their place in the list is somewhat of a mystery. The late Archduke Albert of Austria left nearly \$200,000,000 in cash and bonds, besides a large slice of the empire and about as many millions in the big manufacturing concerns in the country.

**THE ROTHSCHILDS.**  
Probably the wealthiest family in the world's history is the Rothschilds, for their aggregate wealth, which is distributed over twenty branches is not less than \$2,000,000,000 and would probably greatly exceed that amount. The nursery of this vast wealth was a tiny pawnbroker's shop in the lowly neighborhood of Frankfurt, Germany, in the middle of last century, the founder of the great family lived in a quaint little house, in the front

He has been the friend of every nation, and the enemy in turn. These few words express fully the position that Li Hung Chang has held in the political life of the world. As a millionaire, however, he has long held a position at the head of the list for while he was born a poor boy and for a time taught school, he has succeeded in amassing a fortune that is probably not less than \$200,000,000. How he achieved this feat is a secret that the celestial millionaire has not divulged, but his diplomatic life has been full of opportunities and it is evident that they have not been neglected.

At present, while much of his fortune is in China, the wily diplomat has banked a large sum with the Bank of England. During his years of experience he has learned that political supremacy is a most uncertain quantity in the Celestial Empire and he has placed a portion of his property where he would be sure to find it in case of emergency. As it is, however, he is the richest individual in China, with the possible exception of the Dowager Empress.

## CHANK YU'S FIRM.

Another Chinaman whose wealth would pass the hundred million mark is Chank Yu, the president of the Chinese Engineering and Mining Company. Like Li Hung Chang he was a poor boy but he took advantage of every opportunity and today he is not only one of the most wealthy persons in the country, but he can account for every penny of his vast fortune and show that he came by it honestly. He is the iron and coal king of China, the leader in all banking interests and owns a large block of the stock of all the railroad companies in the country. Mexico has a multi-millionaire who, while he bears the common name of John Smith, deserves to be rated among the richest men in the world. The extent of his wealth may be judged from the fact that he himself is unable to estimate it even approximately. "God alone knows how much I am worth," he has said. In spite of this non-committal attitude, however, there is no doubt that he is worth more than \$50,000,000. He owns a gold mine that is simply inexhaustible, and from which he expects to take not less than \$10,000,000 before he dies. In addition to his banking interests and investments in railroad and bank stocks, and he also owns thousands of acres of real estate and so many cattle that it would keep a man busy for a month to count them.

In spite of all this Smith is a man of simple tastes. He lives well but not extravagantly, and his sole ambition is to become the richest individual in the world. If his life is spared he may yet succeed in his ambition, but as he is already more than sixty years of age his success may be regarded as somewhat doubtful.

## AMERICAN BONDHOLDERS.

What is compared to these almost incalculable fortunes are the paltry millions of the Goulds, Saks, and the Vanderbilts. Of course there are rich men in this country. The Astor estate, for instance, is probably not less than \$20,000,000 and John D. Rockefeller alone is worth as much money in his own right. The Vanderbilts, if all their interests should be united, would be worth even more, but even these fortunes, great as they may seem, are small when compared to the hundreds of millions held by some of the rich men of Europe and Asia.

In this country the richest individual

## BUSY BRAINS OF INVENTORS

Gas and electric lights can be automatically extinguished at a predetermined time by a new French device, having a fixed coil being connected in the side of the bulb, with an internal screw thread, to which a threaded cap is secured, the latter being forced on its face for the insertion of the end of the bulb.

An Englishman has patented a helmet which will fit any head, having two semi-circular sections hinged in the crown, one hinge fixed to the head and the other hinged to the helmet, which allows it to revolve to increase or decrease the air circulation.

A Californian has designed a mechanism which has a vertical metallic standard supported on a metal or stone base, with a horizontal tube set on top of the upright portion, the ends of the horizontal tube being closed with caps adapted to receive metal filings.

Corn can be rapidly husked by an Illinois man's invention, consisting of a pin sharpened at one end and fitted with a strap, which interlaces the fingers, allowing the pin to be securely held in the hand while the end is inserted in the husks.

For use in drilling holes in pipe a new brace attachment is formed of two oppositely disposed arms, hinged to a bracket carried by the drill socket, with rollers on the ends of the arms, which passes around the pipe and is automatically wound on a drum as the drill sinks into the pipe.

Instead of picking up persons on a car track a new French device has been patented, consisting of a frame being attached to the car to carry three vertical shafts, which are arranged in triangular form, with wheels running on the side of the rails to drive a belt around an angle to the rail and shoes an obstruction to one side.

wings which ensnare a thimble inserted in the back of the hook.

A handy strainer attachment for tea and coffee trays has two vertical wires inserted in one side of the tray, supporting a metallic ring at the right height to hold a strainer above a cup, thus having it always ready to use.

An Indiana man has designed an apparatus for use in shooting galleries by which imitation animals and birds are propelled on endless belts, either vertically or horizontally, for use in targets, a bullet-proof plate being used as a backing to catch stray shots.

An improved bicycle tire has a wedge-shaped piece of solid rubber set inside the tread, backed by a filling of horse hair in canvas tubes on either side of the wedge, with an inflatable tube at the rear to form the connection between the surface of the rim and the solid rubber tread.

Mandolin players will appreciate a new picking-up device, which is formed of a metallic receptacle containing in the rear of the bowl, the lever being hinged and held in a closed position by a spring, which is depressed for the removal of the pick.

Rats, mice and other pests are expelled from a building by the use of a new Canadian compound, consisting of Chile pepper, heliobol, sulphate of lime, phosphate of lime, carbonate of lime and oxide of iron.

Woven wire is used in the manufacture of a new hammock, the sheet being cut in sections of the proper length and the ends gathered into circular heads, which are inserted in a metallic ferrule having internal screw threads, with spreaders at each end to retain the shape of the hammock.

In an automatic warmer for use in heating and ventilating buildings a metallic plate is hinged inside a tubular chimney, with an opening out in the side of the chimney for the entrance of air from the room, the plate being lifted when the draught increases in the chimney and inducing a current through the furnace.

Punctured bicycle tires are kept automatically inflated by a new mechanism, in which the frame is used as a storage reservoir, with the crank shaft operating the pump piston, valves being placed in a convenient position to admit air to pipes leading to either tire.

Cows can be rapidly milked by a new machine which has a seat for the operator, which also supports four flexible arms ending in rubber teats to be attached to the animal's udder, suction being produced by turning a crank to operate a piston in a cylinder.

A handy tool for carpenters and builders has been placed on the market, consisting of a hollow metallic casing, with hinged doors arranged along the sides and end, to expose a plumb and level indicator, the latter being formed of a gravity hand pivoted on a dial.

Ice cream can be rapidly frozen in a newly-designed freezer, which has a cream can formed of a double tube, with an open passage inside the inner tube, whereby the scales about, beneath and within the hollow of the cream can forms practically a single ice chamber.

A new kitchen sink is formed of a perforated concentric-cylindrical body, for use as a washbasin and skimmer, having a disk, revolved by a handle, with adjustable bands on the face of the disk, which are set to come in contact with the key at the desired time to cut off the gas or electricity.

In a newly-patented carpet-sweeper two brushes are used, being set at right angles to each other, with friction wheels engaging the carpet, to revolve them, the brushes being set at angles to the line of motion of the sweeper, to take up the dirt more effectively.

By a new method of attachment the blades of pairs of scissors, during the use of a fixed coil being connected in the side of the bulb, with an internal screw thread, to which a threaded cap is secured, the latter being forced on its face for the insertion of the end of the bulb.

An Englishman has patented a helmet which will fit any head, having two semi-circular sections hinged in the crown, one hinge fixed to the head and the other hinged to the helmet, which allows it to revolve to increase or decrease the air circulation.

A Californian has designed a mechanism which has a vertical metallic standard supported on a metal or stone base, with a horizontal tube set on top of the upright portion, the ends of the horizontal tube being closed with caps adapted to receive metal filings.

Corn can be rapidly husked by an Illinois man's invention, consisting of a pin sharpened at one end and fitted with a strap, which interlaces the fingers, allowing the pin to be securely held in the hand while the end is inserted in the husks.

For use in drilling holes in pipe a new brace attachment is formed of two oppositely disposed arms, hinged to a bracket carried by the drill socket, with rollers on the ends of the arms, which passes around the pipe and is automatically wound on a drum as the drill sinks into the pipe.

Instead of picking up persons on a car track a new French device has been patented, consisting of a frame being attached to the car to carry three vertical shafts, which are arranged in triangular form, with wheels running on the side of the rails to drive a belt around an angle to the rail and shoes an obstruction to one side.

## GALLANT SANTIAGO TARS.

Guns That Shattered Cervera's Squadron May Be Again.

PHILADELPHIA, September 8.—Philadelphia hopes to proudly welcome the famous North Atlantic Squadron upon the opening of the National Exposition Exposition, and a movement is now being made by the Exposition management to have Secretary Tenzel order Admiral Sampson's fleet here.

One of the leading features connected with the opening of the great industrial show will be "Grand Army and Navy Week," beginning on September 10th and ending on the 15th, at which time the fourteenth annual convention of the National Association of Naval Veterans will be held. It is known that the army side of this demonstration will be grandly sustained and the National interest which attaches to the Exposition should assure the attendance of the North Atlantic Squadron.

The Exposition management believes that Admiral Sampson's fleet should represent the Navy. The New Orleans has been ordered away from the North Atlantic Squadron, but her place could be supplied by the Maine, now at Charleston, Mass., to join Admiral Sampson's fleet. The Admiral, it is known, has expressed himself as hopeful that his fine ships may be ordered to Philadelphia, and it is further known that the President and Secretary Lane are not opposed to the idea. It may therefore be confidently looked forward to that the opening of the Exposition will be thus honored. Inasmuch as the Exposition is a permanent fountain of industrial and commercial expansion the government would simply honor itself, and the men of the squadron, from Admiral Sampson down to the humblest sailor, would be certain of a welcome from Philadelphia's thousands that would be ever one of the grateful memories of their lives.

## THE GRAND LODGE OF ODD FELLOWS

The Sovereign Body to Meet in Detroit September 18th.

DELEGATES FROM RICHMOND.

Messrs. Hill Montague and Manly B. Ramos to Attend—Something About the Good Done by This Large Order.

The Sovereign Grand Lodge of I. O. O. F., which is the governing body of the world for this fraternal body, meets in annual session at Detroit, Mich., September 15th, and Virginia is entitled to five delegates; two from the Encampment Branch and two from the subordinate lodges. The Richmond Odd-Fellows are well cared for by Mr. Hill Montague and Mr. Manly B. Ramos. The attendance at Detroit will exceed five thousand Odd-Fellows, and estimates are made that fully six thousand will be in the grand parade. An effort will be made to have Richmond selected as the next place of meeting. The chances are favorable for the

MR. MANLY B. RAMOS.

selection of this city, and if the body comes here about three thousand visitors will be brought to Richmond.

## ODD-FELLOWSHIP.

Eighty years ago American Odd-Fellowship was born. Seventy-five years since the Grand Lodge of the United States—now the Sovereign Grand Lodge—came into existence.

Wonderful has been the development of this fraternity. In 1819 one lodge and 35 members; in 1829, 11,419 lodges and 38,951 members. During the last sixty-nine years 2,227,381 persons have joined the order, and from a total revenue of two hundred and ten millions of dollars during this period, the sum of eighty-one million has been distributed, not in alms, but in fraternal and brotherly relief. No one can estimate, however, the order's worth as expressed by brother to brother, in the fraternal hand grasp, in the kindly and timely aid, in the words of assistance and comfort. Founded in a splendid sentiment, Odd-Fellowship has earned its place amid the civilizing and Christianizing forces of the age.

## THE SUPREME BODY.

Annually the supreme governing body of the order meets to revise the laws of the order and receive and act upon the reports from its officers and the various State grand bodies. Last May Virginia elected Mr. William H. Bailey the Grand Master of Virginia, and so enthused is he with the work that he is devoting all of his time to the upbuilding of the order in this State. In not quite four months he has visited thirty lodges and travelled throughout the Eastern, Southwestern and Western part of the State. Seven new lodges have been organized, with a membership of about three hundred and fifty, and lodges are in process of formation in the counties of Floyd, Scott, Washington, Madison, Prince Edward, Princess Anne, Warwick and others. The membership in Virginia is somewhat over 11,000, and the increase has been 10 per cent. in the last quarter.

The delegation to Detroit to attend the Sovereign Grand Lodge consists of two well-known Odd Fellows of Richmond and two from other portions of the State.

## THE DELEGATES.

Mr. Hill Montague is one of the successful attorneys of this city, and Mr. Manly B. Ramos is well known as a business man and an organizer of ability. The presiding officer at Detroit will be Mr. Alfred S. Pinkerton, who visited Richmond last April and made an address at the Academy of Music. In his report, he says:

"From the moment my feet touched Virginia soil until the hour of my departure I was the recipient of the most

boundless hospitality and unfailing courtesy. The historic land over which I passed, the wonderful beauty of field and flood, and the warm greeting that is so characteristic of the Virginia people, rendered my visit a source of continual pleasure the few days that it was my good fortune to spend among my brothers in Virginia. In each place that I visited the brethren vied with each other to make my stay both pleasant and profitable."

## LEAVE THE HOME.

The date fixed for the departure of those going to the Sovereign Grand Lodge from our State is the 15th of the present month, and they have selected the Chesapeake and Ohio railway as their route.
